15
An apparatus for locating a receiver of radio communication is introduced particularly to indicate the location of the receiver by a simple symbol so as to navigate a sender thereof to the location of the receiver without using a map. The apparatus, as a simple and practical position-locating device, mainly includes a system control unit, a direction detection unit, a longitude-and-latitude detection unit, an operation unit, a display unit, a data transmission unit, a radio communication interface unit, a voice transmission unit, a voice procession unit, a human-machine interface, a microphone and a speaker.
